PROFESSIONAL SUMMARY

Final-year Computer Science student and Full Stack Developer & AI Specialist with 2+ years of experience in the MERN Stack, Next.js, Data Science, Machine Learning, and AI Agent Development. Experienced in building responsive, scalable web applications and e-commerce platforms for global clients, as well as ML pipelines and AI-driven automation workflows using Python, n8n, and LLM APIs. Currently working as a Software Engineer and Technical Advisor on trading platforms. Passionate about combining intelligent systems and modern web technologies to solve real-world problems.

PROFESSIONAL EXPERIENCE

Technical Advisor - Security & Platform Maintenance | Monetro Prop Firm *2026 - Present*

- Directing platform health monitoring, uptime reliability, and long-term maintenance for web and mobile trading apps handling high-frequency trader operations.
- Enforcing rigorous code review standards, secure deployment lifecycles, and risk-management safeguards to guarantee low-latency execution and transactional integrity.

Software Engineer | Prop Firm Studios *2026 - Present*

- Engineering and scaling core platform features for proprietary trading firm operations, trader assessments, and account lifecycle management.
- Developing high-performance, responsive full-stack dashboards using React, TypeScript, Node.js, and modern RESTful/WebSocket APIs.
- Implementing automated trader evaluation logic, real-time risk parameter monitoring, and secure payment and verification workflows.

Web & App Freelancer | Freelance / Self-Employed *2025 - Present*

- Designed and delivered bespoke full-stack web applications, SaaS prototypes, and custom client portals for global clients.
- Architected autonomous AI workflows and intelligent integrations utilizing n8n, OpenAI/Anthropic APIs, webhooks, and Python scripts.
- Built modern, accessible, and SEO-optimized web interfaces using React, Next.js, and Tailwind CSS, maintaining a 100% on-time delivery rate.

Full Stack Developer Intern | Nexsoft Solutions *Jun 2026 - Sep 2026*

- Developed and maintained scalable web applications, integrating modular React frontends with secure backend microservices.
- Engineered RESTful APIs, optimized database schemas, and implemented role-based authentication and authorization.
- Collaborated in Agile sprints with cross-functional teams to deliver end-to-end features, database integration, and production deployments.

AI / ML Intern | QuantumLogics *Jul 2026 - Aug 2026*

- Assisted in developing end-to-end AI/ML solutions by preprocessing diverse real-world datasets and conducting exploratory data analysis.
- Trained, benchmarked, and evaluated machine learning models for predictive classification and regression using Scikit-learn, Pandas, and NumPy.
- Assisted in building API inference endpoints and data pipelines to integrate machine learning models into client-facing web services.

Teaching Assistant - Multivariable Calculus & Applied Calculus | FAST-NUCES *September 2024 - June 2026*

- Graded 100+ assignments and assessments weekly for a cohort of 90+ undergraduate students, maintaining 98% on-time turnaround.
- Conducted weekly helper clinics, tutorial sessions, and exam preparatory reviews for applied multivariable mathematics.
- Engineered FAST Academic Hub, a deployed web portal actively used by FAST-NUCES TAs and students for grading and performance tracking.

EDUCATION

Bachelor of Science in Computer Science *August 2023 - Present*

National University of Computer and Emerging Sciences (FAST-NUCES)

CGPA: 3.15

TECHNICAL SKILLS

Programming: Python, C++, JavaScript, TypeScript, SQL

Full-Stack Development: HTML5, CSS3, JavaScript, Tailwind CSS, React.js, Next.js, Node.js, Express.js, FastAPI, REST APIs, Webhooks

Databases: MongoDB, PostgreSQL, MySQL, Redis, Firebase

Data Science & Machine Learning: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Data Preprocessing, Regression & Classification Models, Model Evaluation

LLMs & AI Automation: n8n Workflows, REST APIs & Webhooks, LLM Workflows & Integration, Prompt Engineering, Tokens & Context Windows

Tools & Technologies: VS Code, Cursor, AntiGravity, Claude Code, Git, GitHub, Docker, Streamlit, Vercel, Render, Netlify, Jupyter Notebook, Hostinger

Relevant Coursework: Object Oriented Programming, Data Structures & Algorithms, Operating Systems, Database Systems, Machine Learning

FREELANCE PROJECTS

Lvlup Futures - Futures Trading Brand Platform | Live Demo

- Built a professional, responsive trading-focused website presenting the brand's services, platform information, programs, and market-focused content.
- Used Next.js, React, TypeScript, and Tailwind CSS to deliver a fast, modern, mobile-friendly interface for a futures trading brand.

Cosmevo Cosmeceuticals - Beauty & Skincare Ecommerce Website | Live Demo

- Developed a responsive cosmetics ecommerce site with product discovery, category browsing, animated page sections, and cart management.
- Integrated Supabase for backend data and Nodemailer for automated email notifications.

Feel of Luxe - Luxury Jewellery Ecommerce Website | Live Demo

- Created a premium jewellery ecommerce platform with collection browsing, detailed product pages, cart functionality, and a refined responsive experience.
- Added smooth Framer Motion animations and responsive layouts for a polished luxury shopping experience.

Comfort Studio - Modern Furniture Ecommerce Website | Live Demo

- Built a furniture ecommerce platform supporting product variants (fabric, color, size), cart management, and online checkout.
- Developed a Node.js backend and a Next.js/TypeScript frontend for a smooth, responsive purchase flow.

Little Luxe Glow - Jewellery Ecommerce Website | Live Demo

- Built a responsive jewellery ecommerce website showcasing collections with product browsing, category filtering, detailed product pages, cart, and admin functionality.
- Created a refined, mobile-first shopping experience with elegant visuals, smooth animations, and fast load times to match the brand's luxury look.

ACADEMIC & PERSONAL PROJECTS

FAST Academic Hub - TA & Student Marking Portal (MERN Stack) | Live Demo

- Built and deployed a full-featured academic web portal for FAST-NUCES TAs and students to streamline marking, grading, and feedback workflows.
- Designed an intuitive interface enabling TAs to manage assignments, record marks, and provide structured feedback; actively used in real academic operations.

Student Marks Prediction System (Data Science, Machine Learning) | Live Demo | GitHub

- Built and deployed a regression pipeline to predict student exam marks across 3 question types, comparing DummyMean, Linear Regression, and Polynomial Ridge models using Python and Scikit-learn.
- Performed preprocessing, feature selection, and bootstrapped evaluation (Linear Regression best, Test R^2 of 0.54); shipped an interactive Streamlit app for real-time predictions.

Customer Churn Prediction (Data Science, Machine Learning) | GitHub

- Built a multi-model classification pipeline to predict customer churn, comparing Logistic Regression, Decision Tree, Random Forest, XGBoost using Python and Scikit-learn.
- Performed data cleaning, feature engineering, and EDA; evaluated all models on accuracy, precision, recall, and F1 - Logistic Regression performed best (80.5% accuracy, 0.61 F1).

Memory Matching Game (HTML, CSS, JavaScript) | Live Demo | GitHub

- Built and deployed a browser-based memory game with dynamic DOM updates, state handling, and match validation logic.
- Implemented a move counter and timer to track player performance, enhancing interactivity and user engagement.

AI Automated Internship Hunting System (n8n + AI) | GitHub

- Built an AI-powered automation workflow using n8n to collect, filter, and match internship opportunities via APIs, web scraping, and intelligent filtering logic.
- Developed an end-to-end pipeline with webhooks, HTTP requests, and automated notifications, reducing manual job search effort and improving efficiency.

Industrial Website (HTML, CSS, JavaScript Web App) | Live Demo | GitHub

- Built and deployed a responsive multi-page website; integrated assets and ensured clean navigation.
- Deployed on Vercel. Live demo available.

NA Invoice Generator Web App (HTML, CSS, JavaScript) | Live Demo | GitHub

- Built and deployed a web-based Invoice Generator that allows users to create and download professional invoices instantly using HTML, CSS, and JavaScript; deployed on Vercel.
- Implemented dynamic calculations, responsive UI, and PDF export functionality to streamline billing workflows and improve usability.

HONORS & RECOGNITION

- Daira Organizing Award: Actively participated in organizing a 3-day event with seniors and teachers.
- Teaching Assistant Certificate: Recognized for exceptional contributions as a Teaching Assistant by Assistant Professor Dr. Arfan Shahzad.
- Programming Competition Finalist: Secured a position as a finalist in an inter-university programming competition, showcasing strong problem-solving skills.

AREAS OF INTEREST

- Computer Vision, LLMs and image-based AI applications.
- Automation and building intelligent systems using AI.
- DevOps and MLOPs.
